Summary

Junior Software Developer with a Computer Science degree who shipped production code on a live product this summer: owned the **React Native** front end of a mobile community platform and integrated it against a **REST** backend, delivered as a 5-week MVP and deployed weekly. Works AI-augmented day to day, using **Claude Code** inside a normal branch, pull request, and code review workflow. Based in Philadelphia, PA, Eastern time.

Skills

Languages: TypeScript, JavaScript, Python, C#, C, Java, HTML, CSS

Frontend and Mobile: React, React Native, Expo, Redux Toolkit, Vue.js, Bootstrap

Backend and Data: Node.js, Express, REST APIs, Prisma, PostgreSQL, Firebase Authentication, OpenAI API

Tools and DevOps: Claude Code and AI-assisted development, Git, GitHub, pull requests and code review, CI/CD, Docker, Linux, WSL, VS Code

Practices: Agile and Scrum, sprint cycles, full SDLC, version control management, debugging

Experience

IndeVets, Technology Intern, Philadelphia, PA | Jun 2026 - Aug 2026

- Owned the entire frontend as **1 of 2** engineering interns: a cross-platform **React Native** and Expo mobile client in TypeScript for a veterinarian-only community platform.
- Built the full feature set in a **5-week MVP** toward a 6-month product: home feed, post composer, threaded case discussions, moderation queue, inbox, and profile, on Redux Toolkit state and Zod-validated forms.
- Integrated the client against a teammate's **REST** backend (Express, Prisma, PostgreSQL), coordinating a shared Firebase authentication flow and validation contracts across two repositories.
- Shipped to production **weekly** through ticket-based feature branches, **pull request review**, merges to develop, and Friday deploys.
- Presented progress daily to engineering mentors and a cross-functional cohort, taking feedback on technical decisions and scope.

University of Delaware Esports, Production Intern, Newark, DE | Feb 2022 - May 2026

- Led broadcast operations across a four-year progression, staffing **3 to 10** live streams per week, each crewed with a producer, an observer, and two shoutcasters.
- Forked and modified an open-source **TypeScript** broadcast overlay frontend on GitHub, and set up and trained staff on new streaming software and hardware.

Projects

Tails of the Tower, Capstone Studio Game | Godot, GDScript, Git

Playable: csdcsdcsd.itch.io/tailsofthetower | Repo: github.com/Lukebonn/491-S26-TOOMANY-COOKS

- Programmer and version control lead in a **24-student** studio with 9 programmers; **reviewed every commit** into the team repository and managed the GitHub workflow and Discord webhooks.
- Programmed enemy and level systems in GDScript and designed or codesigned every enemy and level in the game.

Side Table Studios Website | HTML, CSS, JavaScript, GitHub Pages

Live: lukebonn.github.io/SDK-Website-files/ | Repo: github.com/Lukebonn/SDK-Website-files

- Designed, built, and deployed a hand-written site for a student game studio over roughly **300 hours**; still live.

Career Advising Web App | React, TypeScript, Bootstrap, OpenAI API

- Built an AI career-advice web app on a **3-person** agile team: a multi-question intake fed an OpenAI-powered bot that generated tailored guidance.

Education

University of Delaware, Newark, DE | Jun 2026

Bachelor of Arts, double major in Computer Science and Game Studies; Minor in English

Relevant coursework: DevOps and Software Engineering, Software Engineering, Computer Networks, Secure Software Design, Data Structures, Human-Computer Interaction
